

Connector shown from top view.
Pins shown as seen on electronic load.

Note J1 - Pin 2 and the (-) source under test are connected, never have current flowing through this path. All control signals should be connected to J1-pin 2. Only the source under test should be connected to the power test terminal (+) and (-).

Scaled output of current
0-100% = 0-4Vdc

J2 open for Constant Current Load must have option 2
